## SUMMARY

Full Stack Engineer with 4+ years of experience building scalable web platforms, blending the ownership of a startup founder with the compliance of enterprise fintech. Proven track record of delivering measurable business impact: secured INR 1.5M in early-stage funding, boosted legacy payment processing speeds by 30% (driving a CNY 2M revenue increase), and accelerated engineering and development velocity by 15% via AI pipelines. Expertise spans React, Node.js, Spring Boot, strict TypeScript, and AWS.

## SKILLS

**Languages & Core:** JavaScript/TypeScript, Python, Java, C++, HTML5, CSS3, SQL, NoSQL

**Full-Stack & Cloud:** React.js, Node.js/Express.js, Spring Boot 3, Vite, REST APIs, GraphQL, Server-Sent Events (SSE), AWS (EKS, API Gateway, Cognito), Docker/Kubernetes, CI/CD, Git

**AI & Tooling:** Google Genkit, Gemini API, Zod, Tree-sitter (AST), Linux/Unix, Agile/Scrum, Postman

## EXPERIENCE

**Saayam For All, Full Stack Developer** | May 2025 - Present

- Developed responsive, dynamic React.js dashboards for real-time volunteer coordination and donation tracking, optimizing component rendering to improve UI load times by 25% and accelerating the volunteer-to-request matching process.
- Architected secure frontend-to-backend integrations, connecting React applications to Java/Spring Boot microservices via AWS API Gateway and implementing robust JWT session management using AWS Cognito.
- Strengthened platform reliability by participating in the deployment of containerized workloads to AWS EKS (Kubernetes) and authoring comprehensive automated test suites, reducing UI regression defects by 30% prior to production releases.

**Capgemini, Financial Services, Senior Software Engineer** | July 2021 - Aug 2023

- Spearheaded the transition of legacy payment modules to a modern ReactJS front-end, boosting transaction processing speed by 30% and contributing to a CNY 2 million increase in annual transaction revenue.
- Built a unified GraphQL data layer using AWS AppSync and Lambda to aggregate data from multiple legacy mainframe services, eliminating over-fetching and reducing client-side network requests by 40%.
- Mentored a team of 3 junior engineers on complex React/API integration patterns, driving knowledge transfer and contributing to team skill growth.
- Engineered a complete CI/CD pipeline using Docker and Jenkins, ensuring all deployments adhered to strict PCI DSS compliance standards for data encryption and security protocols.

**Unlock (startup), Co-Founder / Lead Full Stack Engineer** | Sept 2019 - May 2020

- Co-founded an early-stage tech startup, driving the technical vision and end-to-end product strategy to build a SaaS platform, directly contributing to the acquisition of INR 1.5 million in sponsorship.
- Led full-stack development utilizing the MERN stack (MongoDB, Express.js, React.js, Node.js), engineering backend REST APIs and responsive, data-driven frontend dashboards for real-time user management.
- Developed a hybrid database solution utilizing PostgreSQL with JSONB columns to support dynamic, user-defined inventory attributes, resolving early migration bottlenecks and improving complex query execution speeds by 35%.
- Orchestrated cloud infrastructure and CI/CD workflows using AWS and Docker, establishing containerized deployment pipelines that standardized release processes.

## PROJECTS

**AI Code Documentation Generator** | [Live Demo](#) | [GitHub](#)

- Architected a TypeScript, multi-agent AI platform using Google Genkit and Gemini 3 Flash, designing a 3-tier orchestration pipeline with Tree-sitter AST parsing to automate technical writing, boosting engineering team velocity by 15%.
- Engineered cryptographic logic-integrity checks via AST hashing to mathematically guarantee zero code alteration, eliminating 100% of AI-introduced logic regressions, and deployed via a multi-stage Docker build to Render.
- Developed a React frontend utilizing Server-Sent Events (SSE) to stream agent execution states, reducing perceived latency, and implemented a persistent localStorage quota gate ensuring zero UI downtime during API 429 rate limits.

**MediMatch Patient-Portal**

- Built an award-winning AI-powered patient triage system using Python and scikit-learn, ranking 1st in a graduate program batch judged by industry leaders from Microsoft, Blackrock, and the Senate office.
- Deployed the containerized Django application to AWS using Docker and Amazon RDS for PostgreSQL, ensuring a scalable and highly available service for the human-in-the-loop validation workflow.

## EDUCATION

**California State University, Long Beach, Master of Science in Information Systems** | GPA: 3.80 | May 2025

**Narsee Monjee Institute of Management Studies (NMIMS), Bachelor of Technology in Electronics & Telecommunications** | Aug 2021
