SUMMARY

Software Engineer specializing in AI Platform Architecture and Enterprise Cloud Infrastructure with 3+ years of experience, blending the ownership of a startup founder with the compliance of enterprise fintech. Proven track record of delivering measurable business impact: secured INR 1.5M in early-stage funding, boosted legacy payment processing speeds by 30% (driving a CNY 2M revenue increase), and accelerated engineering and development velocity by 30% via AI pipelines. Expertise spans Java, Node.js, Python, and AWS.

SKILLS

Languages & Core: JavaScript/TypeScript, Python, Java, C++, HTML5, CSS3, SQL, NoSQL

Full-Stack & Cloud: Spring Boot, JPA, React.js, Node.js/Express.js, Vite, REST APIs, GraphQL, Server-Sent Events (SSE), AWS (Lambda, Aurora, DynamoDB, EKS, API Gateway, Cognito), Docker, CI/CD, Git

AI & Tooling: Google Genkit, Gemini API, Zod, Tree-sitter (AST), Linux/Unix, Agile/Scrum, Postman

CERTIFICATIONS: AWS Cloud Practitioner (Academic), Gen AI with LLMs (DeepLearning.AI), Google AI/Prompt Engineering

EXPERIENCE

Blancco Software, *Software Developer (License & Cloud R&D)* | Aug 2026 - Present

- Engineer distributed Java microservices and serverless Python AWS Lambda modules for the Blancco Management Portal, securely managing high-throughput license entitlements and tamper-proof data erasure verification workflows.
- Optimize enterprise data state management across Amazon Aurora and DynamoDB, structuring schemas to securely process, aggregate, and store global IT asset lifecycle reporting logs.
- Maintain and scale enterprise CI/CD deployment pipelines utilizing AWS CodeCommit, CodePipeline, and CloudWatch, ensuring zero-downtime releases and regulatory compliance for cloud API endpoints.
- Accelerate engineering velocity by integrating AI-assisted development tools into rapid-release cycles to minimize sprint delivery latency.

Saayam For All, *Full Stack Developer* | July 2025 - June 2026

- Architected and integrated an internal local-first AI technical documentation tool using TypeScript and Google Genkit, designed to automate complex module analysis and accelerate volunteer engineering velocity by 30%.
- Eliminated 100% of cloud infrastructure token costs and guaranteed data compliance by designing the tool to orchestrate model inference via a local developer pipeline, leveraging Ollama to serve Gemma models directly on client machines.
- Engineered dynamic, real-time React dashboards featuring custom server-side pagination workflows and component memoization, reducing initial UI page load latencies by 25% and optimizing volunteer coordination layouts.
- Integrated cryptographic logic-integrity checks via AST hashing (web-tree-sitter + SHA256) to mathematically guarantee zero AI-introduced logic drift or syntax regressions during automated code-block documentation parsing.

Capgemini, Financial Services, *Senior Software Engineer* | July 2021 - Aug 2023

- Built a unified GraphQL data layer using AWS AppSync and Lambda to aggregate data from multiple legacy mainframe services, eliminating over-fetching and reducing client-side network requests by 40%.
- Mentored a team of 3 junior engineers on complex React components, driving knowledge transfer and team skill growth.
- Engineered a complete CI/CD pipeline using Docker and Jenkins, ensuring all deployments adhered to strict PCI DSS compliance standards for data encryption and security protocols.

Unlock (startup), *Co-Founder / Lead Full Stack Engineer* | Sept 2019 - May 2020

- Co-founded an early-stage tech startup, driving the technical vision and end-to-end product strategy to build a SaaS platform, directly contributing to the acquisition of INR 1.5 million in sponsorship.
- Developed a hybrid database solution utilizing PostgreSQL with JSONB columns to support dynamic, user-defined inventory attributes, resolving early migration bottlenecks and improving complex query execution speeds by 35%.

PROJECTS

AI Content Provenance Scanner | GitHub

- Architected a media verification platform using React and a polyglot Node.js and FastAPI backend to extract C2PA metadata and analyze synthetic signatures, reducing manual verification workflows from 5 minutes to under 5 seconds for 20+ active beta users.
- Deployed a secure cloud network utilizing AWS CloudFront as a global reverse proxy to eliminate cross-origin resource sharing blocks, seamlessly routing static frontend assets from S3 and dynamic API traffic to isolated Docker containers on an EC2 instance.

MediMatch Patient-Portal

- Architected an award-winning AI patient triage platform utilizing a decoupled microservices architecture, ranking 1st in a graduate cohort judged by industry leaders from Microsoft, BlackRock, and the Senate office.
- Engineered a critical human-in-the-loop PostgreSQL database state machine, strictly enforcing doctor authorization workflows for model-generated prescriptions to guarantee legal medical compliance.

EDUCATION

California State University, Long Beach, *Master of Science in Information Systems* | GPA: 3.80 | May 2025

Relevant Computer Science Coursework: System Design & Architecture, Cloud Computing & Database Management Systems.

Narsee Monjee Institute of Management Studies (NMIMS), *Bachelor of Technology in Electronics & Telecommunications* | Aug 2021

Hackathons & Awards: 1st Place & Cash Prize at Ambiora Techfest Hackathon (Rapid prototyping & integration of offline drone telemetry); 5th Place Globally at CompAgri organized by IIT-Bombay Techfest (Farmer's Forum MERN stack marketplace for UAS NMIMS team).
